BY LOLLI CUP™

## ECO-FRIENDLY PRODUCT CATALOG

# From Our Company To Yours

Dear valued customers,

At Karat® by Lollicup™, our goal is to offer a wide selection of premium foodservice products that will work for your individual business operations. As a foodservice manufacturer and distributor, we understand how important quality, affordability, and dependability are to operate a business. We also think beyond these essentials to deliver eco-friendly options for you and the environment. Karat by Lollicup strives to ensure that our products and services help you maintain an innovative establishment and to provide you with the tools you need to grow. As you flourish, we will be right there with you!

Our core values:

## **Quality**

Karat® by Lollicup™ is committed to providing high quality premium products to suit our customers' unique needs, while continually working to expand our product offerings. Browse through our selection of product lines to find everything you need to keep your business running smoothly.

## **Affordability**

We offer competitive prices to meet your operational needs. Whether it is for a new or established business, we will find the best solutions for your budget. Enjoy flexible shipping options on multiple products without the need to purchase in bulk. Choose your preferred shipping method and warehouse location or take advantage of our will call and pick-up options.

## **Dependability**

Customer satisfaction is our top priority. We take great pride in providing excellent customer service before your order is placed through the time you receive it. We are here to help you with any special request, upcoming event, or any questions you may have. We hope you find this material informative and our selection advantageous to your needs. Should you require specialty items or additional assistance, do not hesitate to give us a call.

## **Eco-Friendly**

For every solution, there is an environmentally friendly alternative that helps businesses to achieve a lower carbon footprint. We continue to grow our compostable and biodegradable product lines for those that want to make a difference and go green. This special catalog will cover all the options you have to make the switch!

Our best regards,

All of us at Karat® by Lollicup™

Karat® by Lollicup™ began its legacy in 2000, when entrepreneurs Alan Yu and Marvin Cheng opened the very first Lollicup boba shop in San Gabriel, California. Today, the company is a rapidly growing manufacturer and distributor of premium beverage and foodservice products. Karat by Lollicup is also the parent company to four brands: Karat®, Karat Earth®, Tea Zone® and Total Clean®. These brands highlight innovative new products that stay on trend and offer cost-effective high-quality foodservice products for small and large businesses across the United States.

We focus on business-to-business growth by cultivating established partnerships among industry leaders while providing exceptional support for all our customers. Karat® by Lollicup™ headquarters are located in Chino, California with additional locations in Texas, Washington, South Carolina, New Jersey and Hawaii to allow for quick and efficient service nationwide and beyond. Karat® by Lollicup™ operates on customer satisfaction and always strives for excellence.

# WHAT IS PLA (POLYACTIDE)?

5

Polylactic acid (PLA) is a thermoplastic derived from renewable resources. Common renewable resources used include corn starch, tapioca roots, or sugarcane. PLA is compostable where facilities exist.

## INGEO™ PLA ATTRIBUTES

**APPEARANCE** - Excellent gloss, transparency, and clarity for cups and containers

**VERSATILITY** - Easy to shape, mold, emboss and print, allowing endless branding opportunities

**FOOD PRESERVATION** - Provides exceptional barrier to keep flavors tasting fresh

**BPA FREE** - Derived from all natural resources and free of the harmful chemical Bisphenol (BPA)

## FACTS & ADVANTAGES OF PLA

- 60% LESS non-renewable energy used
- 80% LESS greenhouse gases
- 100% renewable resources (not oil)

## MAKE THE SWITCH!

Karat® Earth PLA products are made with NatureWorks® Ingeo™ PLA. Ingeo is a biopolymer that is manufactured using plant sugars from field corn and from any sugar source. Ingeo is not petroleum-based, so it is nonvolatile and odorless if incinerated. Make the choice today, for a better tomorrow.

## SELECT PRODUCTS HAVE CERTIFICATIONS BELOW:

Make the world a greener place by switching to Karat Earth® PLA disposables. Karat Earth uses only NatureWorks® Ingeo™ PLA plastic derived from renewable resources. Karat Earth PLA cups and lids are available in standard cup and lid sizes, making them an easy alternative. Karat Earth PLA products are compostable in commercial facilities.

## ✓ Key Features

- Made from renewable resources
- Select items are BPI®, Cedar Grove®, and/or CMA certified
- Durable and shatter-proof
- Compostable in commercial facilities
- Clear and stock print design
- Custom printing available

## BAGASSE HINGED CONTAINERS / PLATES / BOWLS / TRAYS

Karat Earth® Bagasse products are a sustainable and environmentally-friendly alternative to traditional products that contain PFAS. Made from leftover fibers from the sugar extraction process, bagasse is a durable material that can be used for all types of food packaging. Not only is it safe for your health, but it also helps to preserve the health of the planet.

## ✓ Key Features

- Eco-Friendly
- Compostable in commercial facilities
- Durable

Karat Earth® bagasse containers and dinnerware are great for holding all of your delicious foods, including hot and cold items. The containers are made with bagasse, which consists of fibers left over from the sugar extraction process of sugarcane. These fibers are strong, durable, and a great source of sustainable material for food packaging. BPI® Certified hinged containers, plates, and bowls are all available!

## ✓ Key Features

- Made from renewable resources
- Durable, sturdy, and microwavable
- Select items are BPI® certified

5.5 oz	1000/case	KE-PSC550

With fast turnaround times and high-quality printing, you can easily advertise your business by letting your brand be the next conversation starter. Customize all your foodservice products by printing your logo or a design on your paper cups, food containers, and more. Read the details below on our custom printing process and let us help you take your branding and marketing efforts to the next level!

## Understanding the Different Printing Methods & Colors

### Offset Lithography

- » This is a standard printing process that uses water and/or oil to keep ink out of non printing areas on the plate.
- » The term offset comes from the fact that the ink design is transferred, or offset, onto something else before it goes onto the printed material.
- » Offset Lithography is for paper printing and can print both CMYK and Spot Colors.

### Flexography & Dry Offset

- » Flexography printing works very much like a typical rubber stamp.
- » Flexible plates are rolled in ink and then transferred onto the final piece.
- » This printing method can be used for paper, plastic, or any special substrates.
- » Flexography can only use spot colors.
- » Dry Offset works a lot like Flexography but the ink is transferred or onto another roller before it goes onto the final product.

### CMYK Printing: (4 color process)

- » This term refers to a printing process that uses a mixture of Cyan, Magenta, Yellow, and Black (CMYK) to reproduce a wide range of colors.
- » A wide range of colors can be printed with just 4 color plates, so the number of colors allowable on each design is much higher.
- » PANTONE® (PMS) color codes can be provided as a final color reference, but not all PANTONE® (PMS) colors can be reproduced accurately.

### Spot Color Printing

- » This term refers to a printing process that uses pre-mixed ink for each color. This limits the number of colors but ensures greater color accuracy.
- » The industry standard for spot colors is the PANTONE® Matching System (PMS) and will be used for all spot colors.
- » Due to the use of food-grade inks, not all PANTONE® colors can be achieved.
- » PANTONE® colors will vary on finished products depending on the material and may vary across multiple materials.

## Software/ File Formats & Requirements

### .AI, .EPS, or .PDF (Preferred Formats)

- Shapes and fonts must be outlined
- Artwork elements must be in layers, not merged

### Images (if any)

- All images embedded
- Images must be at least 300 dpi or higher
- Images can only be printed on paper products

### All Text and Fonts

- Font size must be at least 8 pt
- Font files must be included with submission  
or outlined

## Templates/ Lines

Templates are available for all stock sizes as well as for custom sizes. Feel free to contact a sales representative for a template to get started or let our talented designers work for you.

### Colors

- Define all colors CMYK or PANTONE® Solid Coated/Uncoated Color Code.

### What if I don't have any of these?

If your artwork is designed in another program (e.g. Corel Draw), please save it as a high resolution PDF or EPS file.

### What if I don't have any programs?

If there is no way to provide us with artwork, we can provide you with in-house design service. Please contact us for further details. Minimal design fees may be applicable.

## Disclaimers

### Artwork

Clients take full responsibility in obtaining the copyrights of the design(s) involved in their custom print order.

### Color Accuracy

There is a much higher degree of color accuracy when PANTONE® Color codes are provided. When a PANTONE Color code is provided, finished products are expected to be within 2 PANTONE Colors, either up or down (refer to PANTONE Solid Coated or Uncoated color book). Due to food grade inks, not all PANTONE Color codes can be achieved, and any possible replacement is at the manufacturer's discretion.

### Ink Odor

Custom printed products can have a lingering odor as a result of printing with food grade inks. A degree of ink odor should be expected in all custom printed products. Any replacement is at the manufacturer's discretion.

### Plate Charges

New custom print orders will be subject to plate fees. Plate fees are charged per color, per item. Re-print orders will not be charged plate fees if the existing plates are still in good condition. Customers will be notified if new plates will be necessary for their re-print orders and subsequently billed for the new plates.

### Minimum & Lead Times

All stated minimums apply for each size and/or design ordered. Minimums are subject to change at any time. Due to the nature of custom printed products, there may be a +/- 10% over/under run (variance between amount ordered and amount produced). Lead times are estimated and are not guaranteed.

### Print Gap

For plastic cups, a small gap is left between the leading edge of the design so that the design does not overlap. For paper cups and food containers, normal printing procedure is to leave a white area around the bottom rim, as indicated on the template. Clients can make a special request to extend artwork to the bottom rim but this can result in the printed design cracking once the paper is folded. If this does occur, it will leave flakes inside the cups once they are stacked.
